Product designer and design engineer at the intersection of UX, AI, systems thinking, and design systems, shipping end-to-end from research, information architecture and visual design to high-fidelity UI design, LLM prompts, and production front-end.

## Professional Experience

### Founding Product Designer

Jul 2025 – Aug 2026

COROS AI (B2C SaaS AI coaching startup)

Seattle, WA

- Executed end-to-end design of an AI coaching digital product **0 to 1** across web, iOS, and Android, from ideation, mockups and user flows to high-fidelity responsive UI and front-end, taking it from concept to launch in 2 months.
- Created prototypes and interactive widgets demonstrating micro-interactions and interaction patterns, then shipped them as production code (TypeScript, React, Next.js using Claude code), replacing static handoffs with working builds.
- Redesigned onboarding and core app experiences, based on feedback from 1:1 customer interviews and usability findings, lifting new-signup next-day return to **55%** and weekly active users to **40%**, measured by Mixpanel.
- Led migration from MUI to a token-driven shadcn/Tailwind design system (54+ semantic tokens, design patterns, light/dark, published Figma component libraries), cutting design-to-review cycles from days to hours.
- Authored the LLM prompts generating every on-screen element and prompt engineered the memory/RAG retrieval logic behind the product's session history system, and built a Streamlit QA harness to validate model outputs.
- Invented design narratives to communicate decisions to diverse stakeholders and created an internal tool that allowed a cross-functional team of founders, PMs, and engineers to evaluate AI responses and collaborate in an agile environment.
- Established brand identity, logo, typography using Adobe Creative Cloud, and designed creative marketing visuals, like posts, short-form videos and an investment pitch deck, which led to the first round of investment.

### UI/UX Design Intern

June 2024 – September 2024

Nitecapp (B2B Hospitality and beverage industry startup)

Seattle, WA

- Increased average tip size **15%** at a pilot bar venue by designing a gamified system (badges, streaks, progress bars) that turned backend analytics into real-time, actionable feedback.
- Designed 30+ screens across 5 core flows and wrote documentation, handling real-time updates, offline sync, and delayed-data states, cutting core workflows to under 4 taps, consistently committed to user needs.

## Projects

### Gmail Job Tracker | Full-stack Product Builder

Sep 2026 – Sep 2026

- Built a full-stack Gmail job tracker end to end with Claude Code (TypeScript, React, Next.js, SQLite), using an LLM classifier to auto-sort **200+** application emails into pipeline stages with **96%** needing no manual correction.

### WCAG Accessibility Auditor | Full-stack Product Builder

Sep 2026 – Sep 2026

- Built an AI accessibility auditor with Claude Code that queues scans (Inngest), tests pages (Playwright, axe-core), stores history (Postgres), and tracks usage (PostHog), flagging **900+** WCAG issues across **25** sites.

### Switcharoo | UX Designer and User Researcher

Sep 2024 – Jun 2025

- Won **2nd of 100 teams** worldwide in the RESNA Accessibility Design Challenge with a WCAG-compliant, switch-accessible game library that cut caretaker support from **1 per child to 1 per classroom of 20**, scoped through teacher interviews and usability tests with 25 children.

### Edmonds Historical Museum | UI/UX Designer, Senior Capstone

Jan 2025 – Jun 2025

- Increased exhibit publishing capacity from 250 to 30,000+ items and helped negotiate and secure a \$20,000 grant by designing a user-friendly modular publishing web application and reliable design system.

## Skills

**Artificial Intelligence & Emerging Tech:** Prompt engineering, Context Engineering, RAG, agentic AI, LLM prompt QA, AI-assisted prototyping, Claude Code, Figma Make, UX Pilot, Cursor, dynamic meta prompting

**Design Tools:** Figma, Adobe XD, Adobe Creative Cloud, design systems & tokens, prototyping & wireframing, interaction & micro-interaction design, responsive design, accessible design (WCAG)

**Engineering:** TypeScript, React, Next.js, Three.js, Tailwind CSS, HTML/CSS, JavaScript, Python

**Research:** Qualitative & quantitative research, competitive analysis, usability testing, personas, journey mapping

## Education

### University of Washington

Sep. 2021 – Jun. 2025

Bachelor of Science in Human Centered Design & Engineering (Data Science concentration)

Seattle, WA

- Dean's List · Major GPA 3.93 / 4.0

- **Relevant coursework:** Designing for AI, Human-Computer Interaction (HCI), Data Visualization, Accessible Design, Design Systems & Libraries, Visual Communication Design, User Interface Design (UI), User Experience Design (UX)
