Product designer and design engineer at the intersection of UX, AI systems, and design systems, shipping end-to-end from research and IA to high-fidelity UI, LLM prompts, and production frontend.

EXPERIENCE

Founding Product Designer

Jul 2025 – Present

COROS AI (AI coaching startup)

Seattle, WA

- Designed and shipped an AI coaching product 0 to 1 across web, iOS, and Android, from IA to high-fidelity responsive UI, taking it from concept to launch in **2 months**.
- Shipped widgets in production code (TypeScript + React on Next.js using Claude Code), delivering working builds to engineers instead of static handoffs.
- Redesigned onboarding and the app experience post-launch; **55%** of early signups returned the next day and **40%** of registered users are weekly actives.
- Wrote and versioned the LLM prompts generating every on-screen element and designed the memory/RAG retrieval logic behind the session history system.
- Built a Streamlit QA harness that validates model outputs field-by-field against schema rules, cutting prompt-iteration cycles from **days to minutes**.
- Led migration from Material UI to a token-driven shadcn/Tailwind system (54+ semantic tokens, light/dark, published Figma library), cutting design-to-review cycles from **days to hours**.

UX Design Intern

Mar – Dec 2024

Nitecapp (Hospitality training startup)

Seattle, WA

- Increased average tip size **15%** at a pilot bar venue by designing a gamified system (badges, streaks, progress bars) that turned backend metrics into real-time, actionable feedback.
- Designed **30+ screens** across 5 core flows handling real-time updates, offline sync, and delayed-data states, cutting core workflows to **under 4 taps**.

PROJECTS

Switcharoo · RESNA Student Accessibility Design Challenge

Sep 2024 – Jun 2025

- Won **2nd of 100 teams worldwide** with a WCAG-compliant, switch-accessible tablet app that reduced adult mediation during peer play for 13 children with motor and cognitive disabilities.

Edmonds Historical Museum · UX Designer, Senior Capstone

Jan – Jun 2025

- Increased exhibit publishing capacity from **250 to 30,000+ items** and helped secure a **\$20,000 grant** by designing a modular publishing platform and design system.

SKILLS

AI & emerging tech: Prompt engineering, RAG, Agentic AI, LLM prompt QA, Claude Code, Figma Make, UX Pilot

Design: Figma, Adobe CC, Design systems & tokens, Prototyping, Micro-interactions, Accessible design (WCAG)

Engineering: TypeScript, React, Next.js, Tailwind CSS, Python, SQL

Research: Usability testing, Interviews, Journey mapping, Personas, Competitive analysis

EDUCATION

University of Washington

Seattle, WA

B.S., Human Centered Design & Engineering (Data Science concentration)

Sep 2021 – Jun 2025

Dean's List · GPA 3.8 / 4.0

Coursework: Designing for AI, Human-Computer Interaction, Data & Information Visualization, Accessible Design, Design Systems and Libraries, Service Design, Intro to Machine Learning
